

Radiology Report

Report Date:	2025-12-23
Referring Physician/Doctor:	Dr. Youssef Masmoudi
Patient Name:	Omar Dhaouadi
Patient ID:	19874562
Date of Birth:	15 March 1987
Gender:	Male
Examination Date:	2025-12-22
Examination Type:	Chest X-ray (PA and Lateral views)

Clinical Indication

The patient presented with persistent dry cough for 3 weeks, mild shortness of breath on exertion, and occasional low-grade fever. No history of weight loss or night sweats. No known tuberculosis exposure. Non-smoker.

Findings

- The heart size and mediastinal contour are within normal limits.
- The lung fields are clear with no evidence of focal consolidation, mass, or nodular opacities.
- No pleural effusion or pneumothorax is identified.
- The trachea is midline.
- The bony thorax and soft tissues show no abnormality.
- The costophrenic angles are sharp.

Impression

Normal chest radiograph. No acute cardiopulmonary abnormality identified.

Clinical correlation is recommended. If symptoms persist, consider further evaluation with CT chest or follow-up imaging.

Radiologist:

Dr. Youssef Masmoudi, MD

Consultant Radiologist
