Interpretation and Comments

- All parameters within normal reference ranges.
- Significant improvement in lipid profile compared to previous testing (total cholesterol decreased from 218 to 192 mg/dL, LDL from 138 to 110 mg/dL), consistent with reported lifestyle modifications.
- No evidence of anemia, infection, renal dysfunction, liver abnormality, or thyroid disorder.
- Vitamin D level sufficient; ferritin normal (no iron deficiency).
- Persistent fatigue unlikely related to these parameters; consider non-laboratory causes (sleep quality, stress, etc.).

Recommend continuation of healthy lifestyle. Routine follow-up testing in 12 months unless symptoms change.
