Interpretation and Comments

- Complete blood count, renal, liver, and thyroid function tests are within normal limits.
- Mild hypercholesterolemia noted (total cholesterol 218 mg/dL, LDL 138 mg/dL). No other significant abnormalities.
- Recommend lifestyle modifications: healthy Mediterranean diet, regular physical activity (at least 150 min/week), and weight management if applicable.
- Consider repeat lipid profile in 3–6 months. Statin therapy may be discussed if risk factors present (family history, hypertension, smoking to be assessed clinically).
- Fatigue may be multifactorial; no clear hematological or biochemical cause identified on this panel.

Clinical correlation advised. Please contact the laboratory for any questions regarding these results.
